

## Data Quality Model

### GOAL

- A consistent model to describe and assess data quality in Ko-HAF
- Allowing a common understanding of quality requirements
- Defining quality roles of data suppliers and data users
- Increasing transparency and interoperability for data processing

### CONCEPT

- Common quality definitions and frameworks for data handling between various data suppliers and data users
- Practical examples from Ko-HAF development and other research activities
- Base for quality management of data ecosystems of Automated Driving
